classes anonymes

- implémentation "au vol" d'une interface

```
Thread t = new Thread (  
    new Runnable () {  
        public void run () {  
            try Thread.sleep(5000); //  
                classe statique  
            (printf ---)  
        } catch (Interrupte  
    }  
};  
);
```
